

Dear FCC:

Please, do not destroy HF and VHF radio spectrum, which from all examined reports, will be the result if BPL is allowed. This is a revenue-enhancing device for power companies. Look, I'm all for them prospering, but not to the ruination of shortwave. Not only amateur bands, but International Shortwave and military frequencies will be pollluted with noise from a system soon obsolete. Coast Guard, Customs, Border Patrol, and other Homeland Security agencies depend upon HF frequencies to be clear and useable. Power companies maintain high-voltage lines so as to avoid interference. Why are we allowing them to radiate broad-spectrum, long range interference from BPS? This is senseless, destructive, and dangerous to human life. Part 15 prohibits interference. When did it become legal to emit 'acceptable levels' of interference, as long as it's from BPL?

Please veto this proposal. Legitimizing interference from BPL sets a bad precedent. After all, if it's alright for BPL to disrupt communications, how could another future interfering service be faulted, much less prevented.

Please, do not allow the destruction of HF/VHF spectrum.
